The figure displays the evolution of the average number of nodes in the largest component for six different channels (Ch 104 to Ch 107) over 175 time steps. The x-axis represents time steps from 0 to 175, and the y-axis represents the number of nodes from 0 to 100. All channels start at approximately 50 nodes. Ch 104 (blue) and Ch 105 (orange) remain stable at 50. Ch 106 (green) drops to 0 by time step 25 and stays there. Ch 107 (red) drops to 0 by time step 50 and stays there. Ch 106 (purple) and Ch 107 (brown) both drop to 0 by time step 75 and stay there. A legend in the top right corner identifies the channels by color and marker.

The figure displays a plot of the expectation value of the Pauli matrix σ_y over time for six channels. The x-axis, labeled 'Time', ranges from 0 to 150. The y-axis, labeled 'Expectation value', ranges from -1 to 1. A legend in the top right corner identifies the channels: Ch 128 (blue), Ch 129 (orange), Ch 130 (green), Ch 131 (red), Ch 128 (purple), and Ch 129 (brown). All six channels show a constant expectation value of 0 across the entire time range.
